NOTES TO FINANCIAL STATEMENTS

1. Summary of Significant Accounting Policies and Going Concern

A. Accounting Practices

The accompanying financial statements of Symetra Life Insurance Company (the Company) have been prepared on the basis of accounting practices prescribed or permitted by the Insurance Division, Department of Commerce of the State of Iowa (the Department).

Companies domiciled in the state of Iowa prepare their statutory-basis financial statements in accordance with the National Association of Insurance Commissioners' (NAIC) *Accounting Practices and Procedures Manual* (NAIC SAP), subject to any deviations prescribed or permitted by the Department. No differences exist in the prescribed or permitted practices that result in a material effect on surplus as of December 31, 2025, or 2024.

Under Iowa State Insurance Code Section 508A.1(3) and 508A.1(4) and per Iowa Bulletin 07-06, the Department allows insurance companies with approval from the commissioner to use other than market value for assets held in a separate account where general account guarantees are present. The Company, with explicit permission from the Department, is permitted to record the separate account assets related to its Bank Owned Life Insurance (BOLI) and registered index-linked annuities (RILA) business at other than market value. The assets of the BOLI and RILA separate accounts primarily include bonds and mortgage loans that are recorded in accordance with the guidance otherwise applicable to these assets (See Note 1.C). Therefore, there is no impact to net income or surplus.

Under Iowa Bulletin 06-01, the Department allows insurance companies to record the change in the fair value of derivative instruments purchased to hedge indexed products in the Summary of Operations to be consistent with how the change in indexed product reserves are recorded. The Company uses this election for its indexed-universal life (IUL) and RILA products. There is no impact to surplus.

Under Iowa Administrative Code (IAC) 191-97, the Department allows companies to account for eligible derivative assets using the amortized cost method if the company can demonstrate they meet the criteria for an economic hedge. The corresponding amortization for eligible derivative assets are recorded as a decrease to net investment income. Furthermore, when eligible derivative assets mature, any value received by the Company is reflected as investment income. IAC 191-974 also prescribes the use of a reserve calculation methodology for indexed annuity products that only reflects credited interest on reserves at the conclusion of the index term based on actual index performance. The Company uses this election to adopt IAC 191-97 effective January 1, 2020 for its fixed indexed annuity (FIA) product.

As of December 31, 2025, the market value of eligible derivative assets was \$605,178,219, and the Actuarial Guidance XXXV reserves would have been \$12,781,696,028 using the market value of eligible derivatives assets.

The state of Iowa has adopted a prescribed accounting practice that differs from that found in the NAIC SAP related to the admission of a variable funding note as capital and surplus. Symetra Reinsurance Corporation, a wholly-owned subsidiary of the Company, is entitled to admit as an asset, the value of a variable funding note in conjunction with a reinsurance agreement with the Company as prescribed by Iowa Administrative Code 191-99.11(3). There was no impact to net income. If the Company had not used this prescribed practice, the result would not have triggered a regulatory event at the Company.

The Company has explicit permission from the Department to record the change in fair value of equity, equity-type investments, and certain derivative instruments where hedge accounting is not elected held in a segregated portfolio through the statements of operations instead of surplus. This portfolio includes investments supporting a block of structured settlement annuities that were reinsured to Resolution Re, Ltd (the reinsurer) in 2018. The change in the fair value of these assets is passed to the reinsurer quarterly in accordance with the reinsurance agreement. The Company received explicit permission from the Department to extend the approved permitted accounting practice to a segregated portfolio that includes investments supporting a block of fixed indexed annuities (FIA) and fixed deferred annuities that were reinsured under an affiliated modified coinsurance agreement with Symetra Bermuda Re Ltd ("SBR") effective January 1, 2022.

B. Use of Estimates in the Preparation of the Financial Statements

The preparation of financial statements in conformity with NAIC SAP requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Such estimates and assumptions could change in the future as more information becomes available, which could impact the amounts reported and disclosed herein.

C. Accounting Policy

Premiums are recognized annually on the policy anniversary for traditional individual life policies, consistent with the statutory reserving process. Premiums for universal life policies and annuity considerations with mortality and morbidity risk are recognized when received. Amounts received under deposit-type contracts with no life contingencies, including guaranteed interest and certain group annuity contracts, are recorded as liabilities when received. Group life, health and disability premiums are recognized when due. The costs of acquiring and renewing business and sales inducements are expensed when incurred.

In addition, the following provides a summary of the Company's key accounting policies:

- (1) Short-term investments are stated in the same manner as comparable longer-term investments described below.
- (2) Issuer Credit Obligations, excluding asset-backed and structured securities, and surplus notes not backed by other loans are stated at amortized cost using the constant yield method, except for those with an NAIC designation of 6, which are reported at lower of amortized cost or fair value.
- (3) Common stocks of non-affiliates are stated at fair value, with the exception of common stock in Federal Home Loan Bank (FHLB) of Des Moines, which is stated at cost and investments in stocks of uncombined subsidiaries and affiliates in which the Company has an interest of 10% or more. (See #7 below). For any decline in the fair value of a common stock which is determined to be other than temporary, the common stock is written down to fair value as the new cost basis and the amount of the write down is accounted for as a realized loss.
- (4) Redeemable preferred stocks which have characteristics of debt securities and are rated as medium quality or better (NAIC designations 1 to 3) are reported at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) are reported at the lower of cost, amortized cost or fair value.

Perpetual preferred stocks, which have characteristics of equity securities are reported at the lower of currently effective call price or fair value.

- (5) Mortgage loans on real estate are carried at outstanding principal balances less any impairments.

NOTES TO FINANCIAL STATEMENTS

- (6) Asset-backed securities (ABS), including mortgage-backed securities (MBS), are stated at amortized cost, except for those with an NAIC designation of 6, which are reported at lower of amortized cost or fair value. Income is recognized using a constant effective yield based on anticipated prepayments and the estimated economic life of the securities. Prepayment assumptions are based on current interest rates and the economic environment. When actual prepayments differ significantly from anticipated prepayments, the effective yield is recalculated to reflect actual payments to date and estimated future payments. The net investment in the security is adjusted to the amount that would have existed had the new effective yield been applied since the acquisition of the security (i.e. the retrospective method). For commercial mortgage-backed interest-only securities, the effective yield is adjusted prospectively for any changes in estimated cash flows. The Company includes any resulting adjustment in net investment income in the current period.
- (7) The Company's insurance subsidiaries are included in affiliated common stocks and are carried at their underlying statutory equity, as described in part 5, section 2(c)B1 of the *SVO Practices and Procedures Manual*. Changes in the carrying value of subsidiaries are credited or charged directly to unassigned funds (surplus).
- (8) Other invested assets consist primarily of investments in alternative investments, tax credit investments, and certain investments in non-rated residual tranches. Alternative investments consist of private debt, private equity and hedge funds and are reported at net asset value (NAV) as a practical expedient to fair value. Hedge Funds are primarily held in a segregated portfolio supporting a block of structured settlement annuities that were reinsured to Resolution Re, Ltd. Pursuant to the accounting election discussed in Note 1A, the change in fair value of those alternative investments are recorded in net realized gains (losses) on the statements of operations. Tax credit investments consist primarily of investments in affordable housing projects (low income housing tax credit (LIHTC) investments). These investments are initially recorded at the present value of future contributions, which are considered unconditional and legally binding. Amortization for LIHTC investments is based on the proportion of tax benefits received in the current year to total estimated tax benefits to be allocated to the Company. Impairment losses are recorded for LIHTC investments when the carrying value of the investment exceeds the present value of remaining benefits. Certain investments in non-rated residual tranches consists of collateralized loan obligations which are reported at the lower of cost or fair value.
- (9) Derivatives that qualify for hedge accounting under SSAP No. 86, *Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*, are recognized in a manner consistent with the hedged item, at either estimated fair value or amortized cost. All other derivatives are stated at fair value. Refer to Note 8 for the derivative accounting policy.
- (10) The Company does not use anticipated investment income as a factor in the premium deficiency calculation.
- (11) For group long term disability and group life premium waiver, the liabilities for losses and loss/claim adjustment expense on reported claims are classified as Disabled Life Reserves (DLR); these reserves are calculated on a seriatim basis using tabular methods and discounted for interest, with assumptions reviewed on an annual basis. The remaining liabilities for losses and loss/claim adjustment expenses on these and all other group benefit products are for unreported claims, classified as incurred but not reported (IBNR), and for claims reported but not yet paid or in the course of settlement. These reserves are calculated using a blend of completion factors and loss ratio picks. Assumptions and adequacy are reviewed periodically.

Liabilities for losses on individual disability income contracts are tabulated as the present value of expected future claim payments. Appropriate mortality, morbidity and interest assumptions are used in the calculations. Loss reserves are tabulated on a seriatim basis for each open claim.

- (12) The Company has not modified the capitalization policy from the prior year.

- (13) The Company has no pharmaceutical rebate receivables.

2. Accounting Changes and Correction of Errors

Accounting changes

In 2025, the Company adopted revisions to NAIC Statement of Statutory Accounting Principles SSAP No. 26, *Bonds*, and SSAP No. 43, *Asset-Backed Securities* in alignment with the new Principles-Based Bond Definition (PBBD). The revisions were effective January 1, 2025.

As a result of the adoption, on January 1, 2025 certain securities were reclassified from Bonds (Schedule D, Part 1) to Stocks – Preferred Stocks (Schedule D, Part 2) and Other Invested Assets (Schedule BA). The total amount reclassified was \$165,885,305 with \$129,881,730 moving to Preferred Stocks and \$36,004,575 to Other Invested Assets. The securities transferred to Preferred Stocks include assets within the Company's Separate Accounts.

The reclassification of securities from Bonds (Schedule D, Part 1) to Stocks – Preferred Stocks (Schedule D, Part 2) resulted in a change in measurement from amortized cost to fair value. After remeasurement and transition, the book adjusted carrying value was \$132,715,600.

Upon adoption, the Company elected to report all residuals at the lower of cost or market under the allowable earned yield method. Certain residual tranches that were accounted for at fair value under previous guidance recognized unrealized positions as realized, with the reported value as of December 31, 2024, become the January 1, 2025 cost basis. The revision were effective January 1, 2025. D. Asset-Backed Securities

- (1) Prepayment assumptions for single and multi-class mortgage-backed securities are obtained primarily from broker dealer survey values or internal estimates when survey values are not available.
- (2) The Company did not recognize other-than-temporary impairments (OTTI) for asset-backed and structured securities recognized due to the intent to sell or inability to hold the security to recovery for the year ended December 31, 2025.
- (3) As of December 31, 2025, the Company did not hold any investments in asset-backed and structured securities for which OTTI has been recognized where the present value of cash flows expected to be collected is less than the amortized cost of the security.
- (4) All impaired securities (fair value is less than cost or amortized cost) for which an OTTI has not been recognized in earnings as a realized loss (including securities with a recognized OTTI for non-interest related declines when a non-recognized interest related impairment remains):
- a. The aggregate amount of unrealized losses:

1. Less than 12 Months	\$ 11,733,970
2. 12 Months or Longer	86,428,803

b. The aggregate related fair value of securities with unrealized losses:

1. Less than 12 Months	\$ 2,884,119,184
2. 12 months or Longer	1,008,391,939

- (5) The Company reviewed its investments with unrealized losses in accordance with its impairment policy. The Company's evaluation determined, after the recognition of OTTI, that the remaining declines in fair value were temporary and the Company did not intend to sell these securities at an amount below the carrying value prior to maturity (or recovery). For asset-backed bonds and structured securities, the Company expects to recover the entire amortized cost basis.

The Company uses both quantitative and qualitative criteria to review all securities in its holdings. Based on the Company's experience, investments with amortized cost exceeding estimated fair value by less than 20% do not typically represent a significant risk of impairment under normal market conditions. For those with amortized cost exceeding estimated fair value by over 20% and those that were downgraded by a rating agency, the Company compares the security's implied credit spread to the benchmark spread for bonds with significant credit risk. If the security's spread exceeds the defined tolerance compared to this benchmark, the Company further analyzes the decrease in fair value to determine whether it is an other-than-temporary impaired by considering, among other factors, the following:

- Extent of downgrades of the security by a rating agency;
- Extent and duration of the decline in fair value below cost or amortized cost;
- Financial condition and near-term prospects of the issuer of the security, including any specific events that may affect its operations, earnings potential, or compliance with terms and covenants of the security;
- Changes in the financial condition of the security's underlying collateral;
- Nonpayment of scheduled interest, or the reduction or elimination of dividends; and
- Other indications that a credit loss has occurred.

For bonds and preferred stocks, the Company concludes an OTTI has occurred if a security is underwater and there is an intent to sell the security, or it is more likely than not that the Company will be required to sell the security prior to recovery of its amortized cost, considering any regulatory developments, prepayment or call notifications, and the Company's liquidity needs.

NOTES TO FINANCIAL STATEMENTS

Asset-backed and structured securities are considered other-than-temporarily impaired when the Company has concluded it does not have the intent and ability to retain the security for sufficient time to recover the amortized cost basis, it intends to sell the security prior to maturity at an amount below the carrying value, or it does not expect to recover the entire amortized cost basis even if it has the intent and ability to hold.

8. Derivative Instruments

A. Derivatives under SSAP No. 86 - Derivatives

(1) – (3)

The Company uses derivative financial instruments to hedge certain portions of its exposure to equity market risk, interest rate risk, and foreign currency exchange risk. Derivative financial instruments currently held consist primarily of index options, futures, interest rate swaps and cross currency swaps. Derivatives may be exchange-traded or contracted in the over-the-counter (“OTC”) market. Some of the Company’s OTC derivatives are cleared and settled through central clearing counterparties. The accounting for derivative instruments depends on whether it qualifies and has been designated for hedge accounting. To qualify for hedge accounting treatment, a derivative must be highly effective in mitigating the designated risk of the hedged item. Effectiveness of the hedge is formally assessed at inception and throughout the life of the hedging relationship. When a derivative is determined to be highly effective, it is recorded in a manner consistent with the hedged item. Interest rate and cross-currency swaps generally qualify for hedge accounting and are recognized at amortized cost on the balance sheet. If a derivative instrument does not qualify, or is not designated for hedge accounting, it is recognized at fair value with the changes in its fair value recorded as unrealized gains or losses in surplus. The Company elected Iowa Bulletin 06-01 in 2017 which allows the change in fair value on derivatives that the Company purchases to

NOTES TO FINANCIAL STATEMENTS

hedge equity indexed products, to be included in net realized capital gains (losses) in the summary of operations.

The Company uses index options and futures as part of its equity market risk management strategy. The Company offers FIA, IUL and RILA products that permit the contract holders to allocate a portion of their account value to an index-linked component, where interest credited to the contract is linked to index performance, subject to caps or performance margins set by the Company. The contract holders may elect to rebalance index options at renewal dates, typically annually. As of each renewal date, the Company can re-price the indexed component by establishing revised cap rates or performance margins, subject to contractual guarantees. The Company transacts in index call options and futures according to the portfolio allocation decisions of the contract holders such that the Company is economically hedged with respect to equity returns for the current interest term. In connection with these products, the Company has a hedging program with the objective to hedge the exposure to changes in these indices. The program consists of buying and selling index options and regulated exchange traded futures. Although the Company uses index options and futures to hedge the equity return component of the FIA, IUL and RILA contracts, they do not qualify and are not designated for hedge accounting. Pursuant to accounting elections described in Note 1A, the Company records the change in fair value on index options for its IUL and RILA products through realized gains (losses) in the summary of operations and accounts for the index options at amortized cost for its FIA product.

The Company uses interest rate swaps as part of its interest rate risk management strategy. In an interest rate swap, the Company agrees with other parties to exchange, at specified intervals, the difference between floating-rate and fixed-rate interest amounts calculated by reference to an agreed upon notional principal amount. The Company primarily uses interest rate swaps to synthetically convert variable rate bonds, including investments in collateralized loan obligations, to fixed rate bonds. Most of these derivatives qualify and are designated as cash flow hedges.

The Company also uses interest rate caps and floors as part of its interest rate risk management strategy pertaining to floating-rate investments. The Company will generally take a long position in an interest rate floor to hedge against the risk of falling reference rates, and may choose to partially or fully finance such floor by taking a short position in an interest rate cap. When done in combination, the long floor / short cap combination is referred to as a collar, and while it provides protection against reference rates falling below the floor's strike price, but also results in the Company forfeiting potential gains should the reference rates rise above the cap's strike price. The Company generally does not designate these derivatives for hedge accounting.

The Company uses cross currency swaps as part of its foreign currency risk management strategy, to reduce the risk of changes in currency exchange rates with respect to the Company's investments denominated in foreign currencies. In a cross-currency swap transaction, the Company agrees with other parties to exchange, at specified intervals, one currency for another at a specified rate of exchange. Generally, the notional amount of each currency is exchanged at the maturity of the currency swap by each party. These derivatives qualify and are designated as cash flow hedges.

The Company also uses foreign currency forwards as part of its foreign currency risk management strategy. In a foreign currency forward contract, the Company agrees with other parties to exchange a specified amount of one currency for another at a predetermined exchange rate at a fixed future date. These contracts are used to reduce the risk of changes in currency exchange rates. The company generally does not designate these derivatives for hedge accounting.

The Company uses treasury bond forwards and treasury locks as part of its interest rate risk management strategy. In a bond forward, the Company agrees with other parties to buy or sell a bond or the return on a bond index at a fixed price, the strike price, at a fixed future date, the maturity date. In a bond lock, the Company agrees with other parties or the company issuing a bond that holds or locks the price or yield of the bond being issued. The Company primarily uses bonds forwards and bond locks to mitigate fluctuations in future interest income. These derivatives qualify and are designated as cash flow hedges.

The Company's derivative contracts are primarily non-centrally-cleared OTC instruments that are governed by an International Swaps and Derivatives Association ("ISDA") Master Agreement. For each ISDA, the Company and the counterparty have also entered into a credit support annex ("CSA") to reduce the risk of counterparty default losses in derivative transactions by requiring the posting of cash collateral or other financial assets. The CSA requires either party to post collateral when net exposures from all derivative contracts between the parties exceed pre-determined contractual thresholds, which vary by counterparty. The amount of net exposure is the difference between the derivative contract's fair value and the fair value of the collateral held for such agreements with each counterparty. Collateral amounts required to be posted or received are determined daily based on the net exposure with each counterparty under a master netting agreement.

The Company does not offset recognized collateral amounts pledged or received against the fair value amounts recognized for derivative contracts. For certain centrally-cleared instruments, the Company is required to post initial margin, which is determined at contract inception, as well as variation margin, which is based on the fair value of the derivative contracts and generally determined on a daily basis.

Interest rate swaps, cross-currency swaps, and options have limited off-balance sheet risk related to the risk of default by the counterparty. The current credit exposure of the Company's derivative contracts is

NOTES TO FINANCIAL STATEMENTS

limited to the fair value at the reporting date. The Company manages derivative counterparty risk by carefully selecting counterparties and entering into credit support annex agreements, for which the required collateral is remeasured daily based on the net exposure. The Company also attempts to minimize its exposure to credit risk using various credit monitoring techniques. All net credit exposure for the Company from derivatives contracts is with investment-grade counterparties.

(4) – (6) Not applicable

(7) Derivatives accounted for as cash flow hedges of a forecasted transaction

(1) The maximum length of time over which the Company is hedging its exposure to the variability in future cash flows for forecasted transactions is 21 years, excluding those forecasted transactions related to the payment of variable interest on existing financial instruments.

(2) There were no cash flow hedges discontinued in the statement year as a result of it no longer being probable that the original forecasted transaction would occur by the end of the originally specified period or within 2 months of that date.

(3) Cash flows from derivative instruments that are designed and qualify for hedge accounting and economic hedges are reported consistently with the cash flows from the hedged item.

NOTES TO FINANCIAL STATEMENTS

20. Fair Value Measurements

A. Assets and Liabilities Measured at Fair Value

The Company determines the fair value of its financial instruments based on the fair value hierarchy, which favors the use of observable inputs over the use of unobservable inputs when measuring fair value.

The Company has categorized its financial instruments into the three-level hierarchy, which gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The level assigned to a fair value measurement is based on the lowest-level input that is significant to the measurement. The fair value measurements for the Company's financial instruments are categorized as follows:

- Level 1 – Unadjusted quoted prices in active markets for identical instruments.
- Level 2 – Quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, model-derived valuations whose inputs are observable, and market corroborated inputs. This category includes financial instruments that are valued using industry-standard pricing methodologies or models. All significant inputs are observable or derived from observable information in the marketplace.
- Level 3 – Fair value estimates whose significant inputs are unobservable. This category includes financial instruments for which fair value is estimated based on industry-standard pricing methodologies and internally developed models utilizing significant inputs not based on or corroborated by readily available market information. In limited circumstances, this may also utilize estimates based on non-binding broker quotes.

(3) Transfers into and/or out of Level 1, 2, and 3 are reported at the value as of the beginning of the period in which the transfer occurs.

(4) For bonds reported and measured at fair value, the Company determines whether the market for a security is active and if significant pricing inputs are observable. The Company predominantly utilizes third party independent pricing services to assist management in determining the fair value of its level 2 bonds. Prices received from the pricing services are not adjusted, and multiple prices for these securities are not obtained. The pricing services provide prices where observable inputs are available.

In situations where the Company is unable to obtain sufficient market-observable information upon which to estimate the fair value of a particular security, fair values are determined using internal pricing models that typically utilize significant, unobservable market inputs or inputs that are difficult to corroborate with observable market data. Such measurements are classified as Level 3 and typically include private placements and other securities that the pricing services are unable to price.

The fair values of preferred stocks are valued by pricing services utilizing evaluated pricing models. These valuations are created based on benchmark curves using industry standard inputs and exchange prices of underlying securities of the same issuer. As these inputs are considered observable, preferred stocks are classified as a Level 2 measurement.

The Company's unaffiliated common stocks primarily include FHLB DM common stock and publicly traded common stocks. The FHLB DM common stock is based on redeemable par value and is classified as a Level 3 measurement. The publicly traded common stocks are based on quoted market prices in active markets for identical assets and are classified as a Level 1 measurement.

Derivatives reported and measured at fair value, which include index options and consist primarily of Standard & Poor's 500 Index® (S&P 500) options. The fair values of most options were determined using option pricing models. Significant inputs include index implied volatilities, index dividend yields, index prices, a risk-free rate, option term, and option strike price. As these inputs are observable, most options are classified as a Level 2 measurement. The fair values of other options are determined using Symetra and counterparty's proprietary pricing models and assumptions, as these inputs are not observable, such options are classified as a Level 3 measurement. Cross currency swaps and forwards are valued using a discounted cash flow model. The significant inputs include the projected cash flows, currency spot rates, swap yield curve, and cross currency basis curve. As these inputs are observable, the cross currency swaps and forwards valuation are classified as a Level 2 measurement.

NOTES TO FINANCIAL STATEMENTS

Separate account assets related to the Company's variable products are primarily invested in mutual funds with published net asset values (NAVs) and are classified as a Level 1 measurement. Separate account assets related to the Company's RILA include investments in derivatives, which are valued using the same methodologies described above.

(5) Fair value measurements of derivative assets and liabilities as of December 31, 2025 are included in 20.A.(1) and 20.A.(2)

31. Reserves for Life Contracts and Annuity Contracts

- (1) The Company waives deduction of deferred fractional premiums upon death of insured and returns any portion of the final premium beyond the date of death. Surrender values are not promised in excess of legally computed reserves.
- (2) Traditional Life Insurance

Policies for the majority of substandard lives are charged an extra premium plus the gross premium for a rated age. Mean reserves are determined by computing the regular mean reserve for the plan at any rated age and holding in addition one-half (1/2) of any extra premium charge for the year. The Company has issued a limited number of substandard policies at standard rates and may include impairments through Table 4. Mean reserves for these limited number of policies is the regular mean reserve for the plan.

Universal Life Insurance

COI charges and policy loads are higher for substandard policies. These higher charges are reflected in the reserve calculation. There is no load on the mortality for the reserve calculations, however, the anticipated mortality used for prospective x-factor testing is loaded for substandard tables for products where reflection of substandard mortality is material. X-factors are set with this higher mortality taken into consideration.

Structured Settlement Payout Annuities

For issue years 1988 to present: Each year's mortality factor is increased by a constant, so that life expectancy from the calendar age with adjusted mortality is equal to life expectancy from the rated age with standard mortality. Reserves approach standard over time.

Non-Structured Settlement Payout Annuities

For issue years 1988 to present: Apply 25% test to life expectancy of annuitant. If the annuitant passes the test, each year's mortality factor is increased by a constant, so that life expectancy from the calendar age with adjusted mortality is equal to life expectancy from the rated age with standard mortality. Reserves approach standard over time.

(3) As of December 31, 2025 and 2024, the Company had \$8,724,258,222 and \$8,756,629,625, respectively, of insurance in force for which the gross premiums are less than the net premiums according to the standard valuation set by the Department. 35. Separate Accounts

A. Separate Account Activity

- (1) The Company utilizes separate accounts to record and account for assets and liabilities for the Company’s variable universal life, variable life, variable annuities, registered index-linked annuities (RILA), variable corporate owned life insurance (COLI), and BOLI products. In accordance with Iowa Insurance Division procedures for approving items within the separate account, the separate account classification for the Company’s products are supported by Iowa State Insurance Code Section 508A. See Note 1.
- (2) In accordance with contract provisions relating to the Company’s products recorded within the separate accounts, most of the assets are legally insulated from the general account, preventing such assets from being generally available to satisfy claims resulting from the general account. For BOLI, the Company allows interest income above the required policy account values to remain within the separate account. The amount accumulated over and above the required policy account values is not considered to be legally insulated. For RILA, the Company considers the full account value of contracts issued in Texas, Alaska, and Washington to be legally insulated, as required by those states. For all other states, the amount accumulated over and above the required policy account values or reserve is not considered to be legally insulated.

B. General Nature and Characteristics of Separate Account Business

Separate account assets represent segregated funds administered and invested for the exclusive benefit of policyholders.

For variable policyholders including annuity, COLI, life and universal life policies, the assets of these separate accounts consist of designated underlying funds and are reported at fair value. Investment risks associated with fair value changes are borne by the policyholders. Separate account liabilities represent reserves established to meet withdrawal and future benefit payment provisions of contracts with these policyholders. The separate account assets are not subject to liabilities arising out of any other business the Company may conduct.

NOTES TO FINANCIAL STATEMENTS

For BOLI policyholders, the assets of these accounts include bonds and mortgage loans. Bonds are held at amortized cost and mortgage loans are held at outstanding principal loan balance less any recognized impairment. The majority of these assets are legally segregated and are not subject to claims that arise out of the Company’s other business activities. The liabilities of these separate accounts represent reserves established to meet withdrawal and future benefit payment provisions of contracts with the policyholders.

For RILA policyholders, the assets in these accounts include bonds (and bond-like securitizations), mortgage loans, common stock, derivatives, and other invested assets. Pursuant to the accounting elections discussed in Note 1A, bonds are held at amortized cost; mortgage loans are held at outstanding principal loan balance less any recognized impairment, common stock and derivatives are carried at fair value. Changes in fair value of index options are reported as net realized capital gains (losses) and as a change in surplus for all other derivative types. See Note 1.C.8 for a description of other invested assets. Except for contracts issued in Texas, Alaska, and Washington, these assets are not legally segregated and are subject to claims that arise out of the Company’s other business activities. The liabilities of these separate accounts represent reserves established to equal the policyholder cash surrender value on index-linked funds.

The operations of all separate accounts, excluding investment gains (losses) allocatable solely to the policyholders, are combined with the general account of the Company in the statements of operations under the appropriate captions. Transactions such as premium deposits, surrenders and withdrawals are offset by a corresponding increase or decrease in net transfers to the separate accounts.

For variable universal life contracts, the Company offers a secondary guarantee that the policy remains in force even if the policy account value is below zero.

For variable annuity contracts with guaranteed minimum death benefits (GMDB), the Company contractually guarantees total deposits made to the contract, less any partial withdrawals, in the event of death. The Company offers four types of GMDB contracts consisting of return of premium and three versions of ratchet, which are evaluated every fifth, sixth or eighth year, respectively. For these four types of benefits, the Company contractually guarantees total deposits made to the contract, less any partial withdrawals, in the event of death. The ratchet reset benefit is equal to the immediately preceding GMDB or is “stepped up” to the account value on the evaluation date, if higher. The GMDB is held in Exhibit 5, miscellaneous reserves section, of the Company’s general account statement. The Company reinsurers nearly all of the GMDB risk on its individual variable annuity contracts. Therefore, the recorded liability is not material.

The Company has elected to use the same pricing methodology and sources as utilized for obtaining GAAP fair values in which the security would sell in an arm's length transaction between a willing buyer and seller in possession of the same information. The Company uses quoted market prices from independent third party pricing services or public market information to determine the fair value of its investments when such information is available. When such information is not available for investments, as in the case of securities that are not publicly traded, we determine fair value using other valuation techniques. Such techniques include evaluating discounted cash flows, identifying comparable securities with quoted market prices, and using internally prepared valuations based on certain modeling and pricing methods
